DuraBOND®
PROTECTIVE COATINGS

The harsh conditions of a salt water environment combined with atmospheric corrosion is one of the most challenging problems we as manufacturers can be faced with.

DuraBOND® Protective Coating is a non toxic zinc-rich thermosetting powder coating giving excellent corrosion resistance. It is ODS free (contains no ozone depleting substances) and has no adverse or negative effects on our environment.

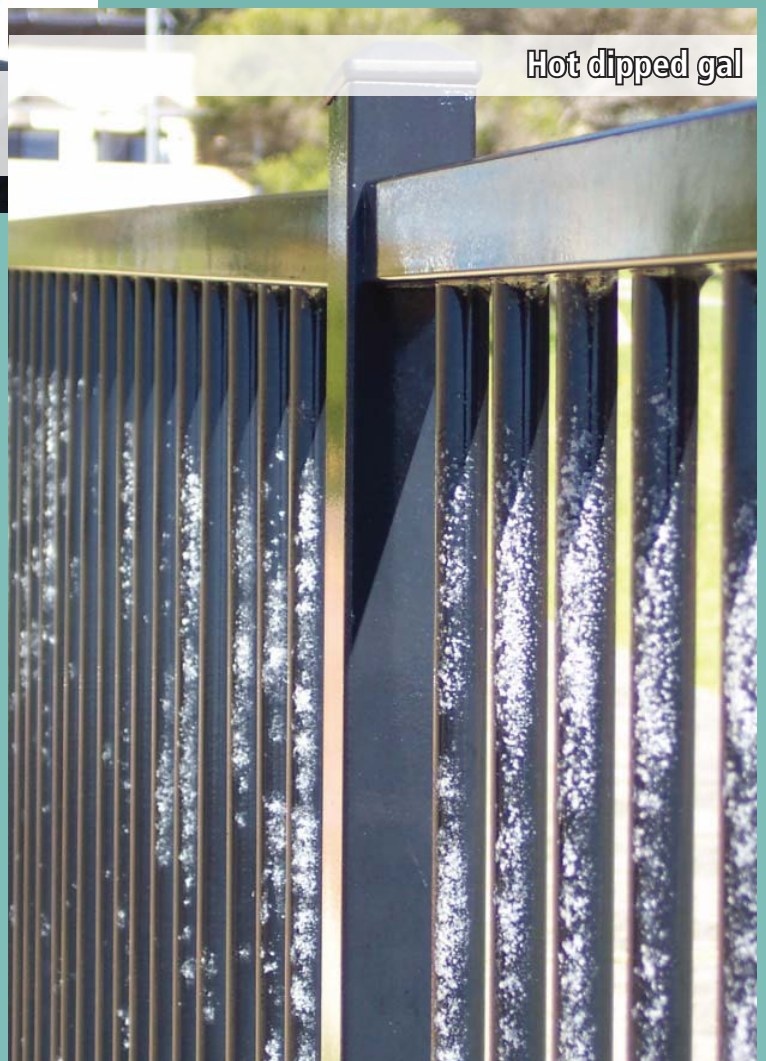

The process involves fencing manufactured from Pre Galvanised steel, pre treated in our zinc phosphate system, coated with **DuraBOND®** then powder coated with the colour of your choice.
